

Grunbyte Products

Thanks to our new line of hardware, protecting the environment now translates into cutting edge performance. Made of minimum 20% post-consumer recycled content, our new printers, scanners and monitors use environmentally friendly components like high impact inks derived from ocean algae. Using proprietary Grun-T technology, you can print high-quality color documents at twice the average speed; scan detailed, hi-res images in seconds; and view complex images at top speed and in true color. Now, you can protect the planet while maximizing your productivity. Being 'green' isn't just the right thing to do, it's the smart thing for you.

Grunbyte Products

Printers

Our printers are made from environmentally friendly products including recycled toner cartridges. There are many versions of this printer including duplex and those that staple.

Scanners

Grunbyte is responsible for many of the industries most environmentally friendly products. The scanners we produce are of the highest quality and include slide scanners as well as large format scanners.

Monitors

These days there are many different types of monitors including CRT, flat panel and more. It can be difficult to make a decision, but our sales reps are there to help guide you through the decision process.

[Link to monitors.](#)

online demos

There are many demos of installation and other procedures on our website here: [Grunbytes product demo](#)

Scanners and PDF

Many scanners today come with the ability to create a PDF file on the fly. With the click of a button, the scanner can generate a color or black and white PDF. PDFs that are generated in this way are typically at full resolution. Using Acrobat 9 Professional Extended, you can easily edit the file so that the resolution is decreased.

Green Technologies

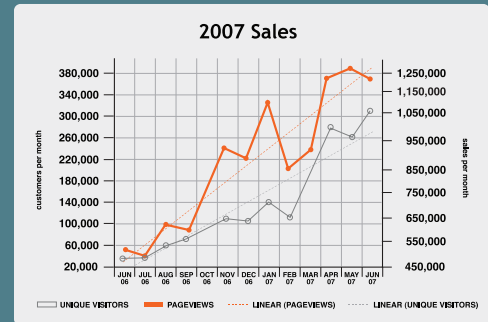

Since the green revolution got started several years ago, many green technology companies have come and gone. Grunbytes is dedicated to saving the environment, one machine at a time.

With a state of the art lab and engineers working around the clock, we are assured that new products and concepts will continue to be brought to market.

2008 Investor Returns

This year was a banner year for Grunbytes technology. Thanks to all of the talk about new "green" technologies, our business has expanded greatly. 2008 was a banner year for our investors since the turn around in the technology sector.

2009 is shaping up to be a great year for us as well. With the introduction of 8 new products sure to ease the burden on the environment. From scanners and printers to our new line of eco-friendly digital cameras. Investing in Grunbytes is easy and very affordable. Get in on the ground floor!

Flat panel monitors come of age

A flat panel monitor with bioluminescent agents in place of the standard CRT.

Ever since the introduction of the first CRT (Cathode Ray Tube monitor) years ago, we have been working towards technology that is both environmentally friendly and cutting edge technology. We believe that we have finally answered that call with our newest line of flat panel monitors.

Our latest line of flat panel monitors have very low energy consumption as well as better clarity and color that ever before. This is thanks to a new biotechnology related to algae, called bioluminescence. Bioluminescent agents are in place of tubes for both light generation and color creation. This has led to a breakthrough that engineers at Grunbytes have recently patented for further research and use.
